

# VT50

## Android Amplified Video Speakerphone

designed with hearing, vision, or speech-impaired users in mind

Model VT50 merges the flexibility of the Android OS with the reliability of analog amplified speakerphone.

This smart special needs telephone sets your conversations free with simultaneous voice, video, and text communications. Large buttons, an oversized LCD display, frequency-specific amplification, an extra loud ringer also make this the perfect device for those with hearing, visual, and speech impairments.

Android's superior graphical user interface means that you can spend less time figuring out how to navigate your phone, and more time just using it. Customize your phone's look to make it yours.

Know immediately who's calling from across the room: watch their profile photo and number pop up on VT50's full color display. Set up your phone book just once with Android Contacts. Your home and mobile directories can be fully synchronized.

VT50 offers the reliability, crystal-clear voice clarity, and no-fuss installation you expect from landline phones-while bringing your phone to the cutting-edge in internet-based telecommunications.
